Design a database for YB college:

1. **Project scope (short paragraph)**
   Write a story that defines the purpose and scope of the database. Describe the main entities (e.g., students, lecturers, etc).

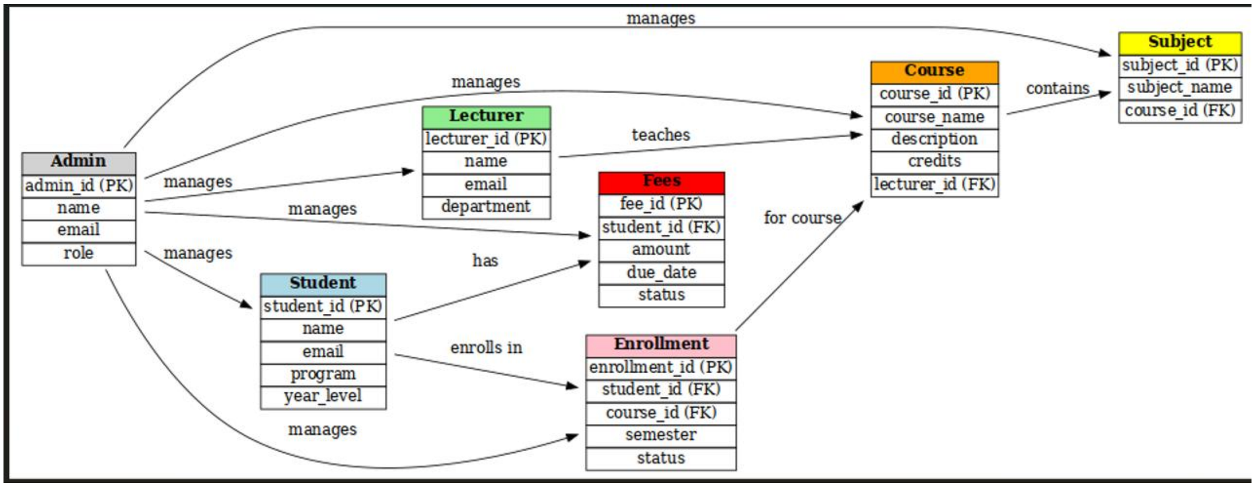
    A database that tracks course enrollments and allows access for students, lecturers, and admins. This database will track the number of enrollees per course. It will allow students and lecturers to access relevant data. Lastly, this database will enable admin users to manage course data. Here's a breakdown of the **entities**, their **attributes**, and the **relationships** between them:

A. Student
B. Lecturer
C. Admin
D. Course
E. Enrollment
F. Fees
G. Subjects

🔗 **Relationships**

- **Student ↔ Enrollment ↔ Course**
  A student can enroll in multiple courses; each course can have many students.
- **Lecturer ↔ Course**
  A lecturer teaches one or more courses.
- **Course ↔ Subject**
  A course can have multiple subjects.
- **Student ↔ Fees**
  Each student has associated fee records.
- **Admin ↔ Student / Lecturer / Course**
  Admin can add, update, or delete records for students, lecturers, and courses.

2. **Entities and EER diagram**
   List all entities with brief descriptions of their roles and attributes (e.g., Student, Course,



3. **Table design**
   State how many tables are required after mapping the EER to a relational schema.

1. **Student**
   student_id (Primary Key)
   name
   email
   program
   year_level

2. **Lecturer**
   lecturer_id (Primary Key)
   name
   email
   department

3. **Admin**
   admin_id (Primary Key)
   name
   email
   role

4. **Course**

course_id (Primary Key)
course_name
description
credits
lecturer_id (Foreign Key)

5. **Subject**
   subject_id (Primary Key)
   subject_name
   course_id (Foreign Key)

6. **Enrollment**
   enrollment_id (Primary Key)
   student_id (Foreign Key)
   course_id (Foreign Key)
   semester
   status (e.g., enrolled, dropped, completed)

7. **Fees**
   fee_id (Primary Key)
   student_id (Foreign Key)
   amount
   due_date
   status (paid/unpaid)
